

So I'm Harshit, who is studying at International Institute of Information Technology Pune. I have seen a common problem in colleges that there is not a proper structure where student can find all the information (grades, schedules, events, etc) at one place. Almost all colleges have a website but it is not at all reliable. So i have a nice idea of a an universal app. which every college can customize according to their needs and students will get most benefited from it. Its like a basic template app. which colleges can directly copy paste and just change the predefined text to add their college name, and almost everything else, except changing the core structure of the app.

Example :- Phone Manufacturing Companies take google's android as a base and add their things skins for customization; Like funtouch of vivo, hyperos of xiaomi, one ui of samsung, etc

Our target audience of the app is the people who are already in the college. Students, teachers and even then parents. So we are just assuming that everyone knows about this app because when they come for admission they are told to download and register on the app. which will be the first step.

Login Page

College will issue different username/ serial numbers for students and teachers.

Passwords will be set by students at the time of admission and teacher at the time of hiring.

OTP will be sent to the mobile number for two factor authentication because can password some how get leaked.

The above displayed screens are just the low fidelity designs, let me explain each of the components :-

Most of the things are self explained,

So Im going to tell about the panel and buttons below,

1. Teachers :- In that screen, students can see what announcements and message that teachers sends. Names of each subject faculty and their office room no.
2. Due dates :- Here every assignment's last submission dates are shown so that student don't forget the deadline.
3. Events, Fest, News :- Here students can see about upcoming fests and events and also pictures and videos about past events and fest.
4. Social :- Here, the student can connect with their fellow classmates to exchange notes or anything else.
5. Schedule :- Here teacher can see upcoming schedule for exams, paper setting, etc
6. Exams :- Here teachers can see about all other exams
7. Students :- Here teachers can see leaderboard like which student has scored how much.

So, the high fidelity design looks something like this, I know it is not the best looking app on the market but it is very helpful for students and teachers also it is ad free, who likes ads ? Maybe if i change few colors it will look more nice but for now let it remain that way. I haven't learn color theory yet so once i learn it in near future maybe ot will help. To whom so ever is reading this, Hope have a nice day ahead !!!
